Freddy Jose Diaz Arias

Backend / Full-Stack Developer

Miranda, Venezuela | +58 412-852-1068 | freddyjda1@gmail.com | GitHub: github.com/freddyjda

PROFESSIONAL PROFILE

Backend / Full-Stack Developer with hands-on experience building complete software products from scratch: backend, APIs, desktop applications, web services, and databases. I work mainly with Python, Node.js, and TypeScript, and I have taken my own projects to production where they generate real revenue. My approach is to turn concrete problems into simple, maintainable software solutions, reducing complexity and technical debt within the constraints of each project.

DEVELOPMENT EXPERIENCE

Full-Stack Developer — Independent Projects 2024 – Present

Independent development of complete software products from scratch, including backend, APIs, desktop applications, web services, databases, and integrations with external services. Products taken to production and used by real users.

> **Continuous transcription and translation tool for interpreters** (Independent project) 2024 – Present
>
> A proprietary real-time continuous transcription and translation tool, built to solve real needs from my work as a medical interpreter. Currently in development and being prepared for commercial release.
>
> - Design and development of the entire system.
> - Continuous audio processing, speech-to-text transcription, and translation during interpretation sessions.
> - Integration with external APIs and services.
> - Building the full pipeline, from audio input to delivering the result.
> - Development focused on real-time use and the specific needs of interpreting.
> - Evolving the tool based on real usage and the needs identified during my work as an interpreter.

> **Co-Founder & Full-Stack Developer — Axo System C.A.** December 2025 – Present
>
> VantPOS — Hybrid point-of-sale system used by real businesses in Venezuela.
>
> - Complete product development from scratch: backend, web services, Electron desktop application, and web dashboard.
> - Sales and inventory management, with batch inventory and multiple warehouses.
> - Accounts payable and cash register closings.
> - Synchronization between local components and web services.
> - Design and evolution of the system architecture.
> - Adapting the product to the real needs of users.
> - Contributing to product and business model decisions.

TECHNOLOGIES

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Backend:** FastAPI, Node.js, REST APIs, GraphQL
- **Databases:** PostgreSQL, MongoDB
- **Desktop / Frontend:** Electron, React, React Native, Avalonia
- **Infrastructure:** Linux, SSH, scripting, Hetzner
